

**I. AMENDMENTS TO THE SPECIFICATION:**

Please amend the specification as follows.

1. Kindly replace the paragraph on page 10, line 30, to page 11, line 10, which begins with “For some applications...,” with the following new paragraph.

For some applications it is advantageous to be able to eject two different liquids stemming from 2 different reservoirs contained within the same liquid droplet spray device through the same nozzle outlet means of the that device. To this effect, in an alternative arrangement, it is possible to split space 3 into two sub-spaces 3a and 3b via a thin, leak-tight membrane 50 or other gasket type vertical separation located in space 3. Each sub-space is connected to a reservoir, for example by way of its own capillary channel, thus allowing to feed two different liquids to be ejected together through the nozzle membrane section. A schematic representation of such sub-spaces is shown in figure 6.
